# TOYOTA LAUNCHES NEW CELICA

Bridge Autos Toyota has launched an all-new Celica, with one of the most advanced engines available in a car in Australia.

The seventh-generation Celica has striking styling, new dimensions, new suspension and leading-edge driveline technology.

It is smaller overall and lighter than the vehicle it supersedes, and has 40 percent more power.

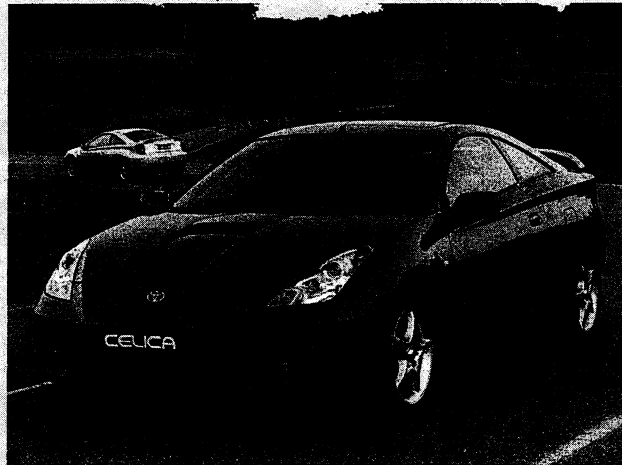

Toyota has increased Celica's wheelbase, interior space and luggage capacity, while making the overall vehicle more compact. Celica is the first Toyota in Australia with a six-speed transmission, side airbag availability and E-shift, and only the second Toyota (after recently launched Echo) with intelligent variable valve timing.

Celica's all-new 1.8 litre twin-cam 16-valve engine has intelligent variable valve timing and intelligent variable valve lift. It delivers 140kW of power at 7600rpm.

Celica's all-new engine is matched to two breakthrough transmissions - a six-speed manual transmission and the first TMC-produced transmission in Australia with Formula One-type electronic shift.

The four-speed direct-drive automatic transmission can be shifted using buttons on the steering wheel.

Celica's 0-100km/h acceleration time has been slashed by nearly two seconds. Celica's improved performance is matched to improved active and passive safety, a new stronger body, double-wishbone rear suspension, a new interior and lower NVH.

Celica's suspension provides improved steering, handling, grip and ride. Celica's new interior features a cross-over style cockpit, with motorcycle-style instruments, a genuine leather bound three-spoke steering wheel, drilled metal pedals (ZR model only) and race-car type front seats.

The new Celica is significantly quieter than its predecessor in all driving conditions.

Two Celica models are offered - SX and ZR - both with the choice of six-speed

manual or e-shift automatic transmission.

All models have dual SRS airbags with force-limiting front seatbelt pretensioners, ABS with electronic brake distribution (standard on ZR, optional on SX), CD tuner with six speakers, alloy wheels with V-speed rated tyres, cruise control, wire-

less door locks and power windows. Side airbags are standard equipment on Celica ZR and optionally available on Celica SX.

Recommended retail prices range from \$39,950 for Celica SX manual to \$46,900 for Celica ZR auto.

## Law Society Public Purposes Trust Grants

The following grant applications to the Public Purposes trust were approved by the Attorney General on 21 October 1999:

1. Domestic Violence Legal Help - funding for interstate travel to a domestic violence conference.
2. Anzac Hill High School - funding to purchase books for their school law library.
3. Top End Womens Legal Service - funding to research, publish and implement a non-English-speaking-background women's legal resource kit.
4. Desart - funding to develop a web page on contracts.
5. The Institute of Aboriginal Development - funding to purchase books for use by students of the Diploma of National Indigenous Legal Studies.
6. The Law Society of the NT - funding for Law Week 2000, a speaker for the Opening of the 2000 Legal Year, the Inter-school Mock Trial Competition and the Martin Kriewaldt Memorial address.

## Correctional Centres require identification

Northern Territory Correctional Services has upgraded its security arrangements, and now requires legal practitioners to produce documentation proving their professional status before gaining admittance to correctional centres.

"While a driver's licence can establish a person's identity we now also require the production of documentation indicating the person is, in fact, a solicitor. "This is to overcome the possibility of persons masquerading as solicitors so as to have unauthorized visits," said Superintendent Rodney Williams.

A copy of your practicing certificate would be deemed suitable documentation for proof.
